PROFESSIONAL SUMMARY

Backend Software Engineer with ~18 years of software development experience, including ~10 years building production backend systems with Java and Spring Boot. Experienced in designing scalable, high-availability distributed systems, REST APIs, concurrent and asynchronous processing, event-driven architectures, and cloud-native services across AWS and Azure. Worked across the full lifecycle of backend systems: performance optimization, fault tolerance, incident investigation, root-cause analysis, monitoring, and support for production systems.

WORK EXPERIENCE

Klika-Tech

April 2018 - August 2025

Software Developer

Wrocław, Poland

- Designed and developed scalable backend services using Java, Spring Boot, PostgreSQL and MongoDB in distributed production environments
- Built and integrated REST APIs using Spring MVC and WebFlux, and asynchronous/event-driven services, supporting reliable communication between distributed components and external systems
- Developed and operated cloud-native services using AWS/Azure, Kubernetes and Docker, contributing across the full development lifecycle from design through production
- Investigated performance, reliability and production incidents, performing root-cause analysis and improving monitoring, logging and fault tolerance
- Diagnosed and mitigated a production OOM/backpressure incident under peak load by right-sizing JVM heap allocation, restoring service stability and documenting longer-term architectural recommendations for the receiving support team
- Optimized SQL queries and data access for high-volume backend workloads, cutting some query times from ~60 seconds to under 6 seconds
- Worked closely with DevOps/SRE, QA, product and engineering teams to deliver and operate production services
- Contributed to code reviews, testing, and production support
- Contributed to LUCI Mobility (luci.com) during its early-stage startup phase, building backend services in TypeScript
- Contributed to a recent automotive project (client confidential) orchestrating OTA (over-the-air) software updates across multiple clients and a fleet of several thousand devices
- Contributed to several additional projects, including legacy codebase refactoring and building small startups from scratch

South Point

February 2016 - March 2018

Software Developer

Yekaterinburg, Russia

- Contributed to the development of an enterprise geographic information system, implementing backend services with Spring Boot and Glassfish/Payara, REST APIs, and business-critical system integrations
- Used Jenkins for CI/CD

Ether J.S.C.

February 2008 - January 2016

Software Developer & System Administrator

Moscow, Russia

- Built the video processing pipeline (upload, transcoding to multiple quality/format variants, cataloging) and streaming delivery (scheduled, on-demand, and live streaming via Wowza Media Server) for a video streaming platform, processing ~4TB of video material in total across 3 quality variants per upload
- Sole developer and administrator for the company's technology stack across 4 physical servers (video processing/storage, infrastructure/mail/DNS, web, and broadcast), also managing all company infrastructure (storage, mail server, tenant web hosting)

Early Career

2001 - 2008

Freelance -- local network installation & administration, website development

Irkutsk, Russia

SKILLS

Backend Development: Java, Kotlin, Spring Boot, Spring MVC, Spring WebFlux, JPA/Hibernate, JDBC, Kotlin Exposed, REST APIs, Node.js, Express.js, JavaScript, TypeScript, Knex

Cloud & Infrastructure: AWS, Azure, Kubernetes, Docker, Terraform, Helm

Databases: PostgreSQL, MongoDB, MySQL, DynamoDB, Redis, SQL Optimization

Architecture: Distributed Systems, Event-Driven Architecture, API Design, Asynchronous Processing, Service Integration, Fault Tolerance, High Availability

Web Security: Spring Security, Secure API Design, OAuth2, OIDC, JWT, AWS Cognito, Keycloak, SSO

Development & Testing: JUnit, Spock, Git, CI/CD, Elasticsearch, Kibana, IntelliJ IDEA, Eclipse, Gradle

Messaging: Kafka, SQS, Event Hub, MQTT (working knowledge), RabbitMQ (working knowledge)

Other: Linux, Bash, Python, GitHub Copilot, OpenAI Codex, Claude Code

Secondary Skills: React UI development and bug fixes as secondary support alongside primary backend work, plus deployment/DevOps support

EDUCATION

Applied Mathematics Irkutsk State University

SPOKEN LANGUAGES

Russian -- Native, English -- Professional (B2), Hebrew -- Elementary
